The motherboard is an ACER MG43M. Right now its running 2 x 1gb sticks of DDR3 ram however memory is really low. In the instruction manual for this motherboard it mentions the following info:

Ram upgrade not working : techsupport

Since the good people here are almost always either other Acer customers of Acer employees on their own time, it's tough to get detailed info that's official. Click on "Like" if you find my answer useful or click on "Yes" if it answers your question. 0.
