Algebra 2 - Things to Remember!

The Algebra 2 course, often taught in the 11th grade, covers Polynomials; Complex Numbers; Rational Exponents; Exponential and Logarithmic Functions; Trigonometric Functions; Transformations of Functions; Rational Functions; and continuing the work with Equations and Modeling from previous grades.

Algebra II | Math | Khan Academy

$x = 2$. To find the value of y , substitute 2 for x in the first equation. $y = -3(2) + 4 = -6 + 4 = -2$. Therefore, the solution of the given system of equations is $x = 2, y = -2$. Check this solution by substituting the values into the second equation and making sure the resulting equality is true. 2. A.

Algebra 2 Practice Questions - Study Guide Zone

Algebra 2 is the third math course in high school and will guide you through among other things linear equations, inequalities, graphs, matrices, polynomials and radical expressions, quadratic equations, functions, exponential and logarithmic expressions, sequences and series, probability and trigonometry. This Algebra 2 math course is divided into 13 chapters and each chapter is divided into several lessons.

OpenAlgebra.com: Free Algebra Study Guide with Videos

Since distances are never negative, the absolute value of a number is always positive (or equal to zero). In order to make the equation true, the expression inside the absolute value, $x + 5$, can equal either -3 or 3 since the absolute value of both values is 3 . Write two equations and solve each. $x + 5 = -3$
