Where does Black Sand Come From?  
Most New England beaches during the winter, with the tide action and currents, will strip the soft yellow quartz sand from the beach, revealing the black sand. The picture below is an example of this wave action. This picture was taken at Ocean Beach Park in New London, CT during the winter.

A common mineral giving the beach a dark color is Magnetite. You may also be familiar with black-sanded beaches derived from volcanic sediments such as the beach seen in the cover image. Here are some different close-ups of sand grains from different beaches. The closer you inspect the sand grains, the more colors you will find.

Sand results when rocks and minerals are broken down by erosion and weathering over time into small particles of various sizes, similar to grains of salt. Pure sand is rarely encountered in natural settings. Instead, it is usually mixed with other substances that affect the blended, sandy soil they create.
