Turnip Peroxidase In this experiment, you will study the enzyme peroxidase from turnips. Peroxidases are widely distributed in plant and animal cells and catalyze the oxidation of organic compounds by hydrogen peroxide as follows: peroxidase H-R-O-H + H<sub>2</sub>O<sub>2</sub> R=O + 2H<sub>2</sub>O

extracted from a turnip was tested for its efficiency in binding to its substrate and its stability under several conditions.

## **Peroxidase Lab Report Essay Sample**

During this experiment you will study a type of enzyme called peroxidase, which is a large protein containing a heme cofactor in its active site. Peroxidase is a

The experiment focused on the impact of enzyme concentration on

# Download Ebook Enzyme Turnip Peroxidase Report

enzyme (peroxidase) activity. Turnip extract is the source of peroxidase in the experiment. There was a direct relationship between the enzyme concentration and enzyme activity, and as the enzyme concentration was changed, reaction time was recorded as were the spectrophotometer readings.

As could be predicted, the purified enzyme from a common soil fungus has a pH optimum of 5.5. The main enzyme for this lab, peroxidase, is found in many different forms, with optimum pHs ranging from 4 to 11 depending on the

The oxygen that is released is used just as respiratory oxygen is used. In fact, the peroxidase reaction is an important source of oxygen for routine use in some metabolic pathways. Like the oxygen-carrying protein hemoglobin, peroxidase has a heme group at its active site; an iron atom in the heme is essential for the enzyme to function.

## **Properties of the enzyme peroxidase**

Peroxidase is an enzyme found in a wide variety of organisms, from plants to humans to bacteria. Its function is to break down hydrogen peroxide ( $H_2O_2$ ), which is one of the toxins produced as a byproduct of using oxygen for respiration. (The fact that it's toxic is what makes

Adding more peroxidase increased the rate of reaction, and the peroxidase at 30.2°C reacted the quickest out of all the other temperatures. As we increased the pH the rate of the reaction increased and when adding an enzyme inhibitor (hydroxylamine) there was little to no reaction.
