Computer simulation is the process of mathematical modelling, performed on a computer, which is designed to predict the behaviour of or the outcome of a real-world or physical system.Since they allow to check the reliability of chosen mathematical models, computer simulations have become a useful tool for the mathematical modeling of many natural systems in physics (computational physics ...

Computer simulation - Wikipedia

Mathematical modeling and computer simulation are nowadays widely used tools to predict the behavior of biological research problems. To illustrate the idea, we consider nonlocal effects and long range diffusion mathematical biology model. The classical approach to diffusion is the following form 1) ()

Mathematical and Computer Modelling provided a medium of exchange for the diverse disciplines utilizing mathematical or computer modelling as either a theoretical or working tool. Equal attention was given to the mechanics, methodology and theory of modelling with an attempt to advocate either mathematical or computer modelling, or a combination of the two, in an integrative form.

Mathematical and Computer Modelling - Journal - Elsevier

In the computer application of modeling and simulation a computer is used to build a mathematical model which contains key parameters of the physical model. The mathematical model represents the physical model in virtual form, and conditions are applied that set up the experiment of interest.

Modeling and simulation - Wikipedia

Simulation of a system is the operation of a model in terms of time or space, which helps analyze the performance of an existing or a proposed system. In other words, simulation is the process of using a model to study the performance of a system. It is an act of using a model for simulation.

In the present paper, a mathematical model is proposed to simulate the succession of two epidemics with variable human populations. Stability analysis of the equilibrium points is carried out and a simulation is given for different parameter settings.

Dengue fever: Mathematical modelling and computer simulation

Simulation is a technique of studying and analyzing the behavior of a real world or an imaginary system by mimicking it on a computer application. A simulation is works on a mathematical model that describes the system. In a simulation, one or more variable of the mathematical model is changed and resulted changes in other variables are observed.
