A medical specialist will present the results in an official document which may required a medical translator. Operative Report. It is a report prepared to detail the procedures and findings of a surgical operation. The medical and healthcare translator should avoid any ambiguity and be as clear and concise as possible.

6 different types of medical documents

The 1995 guidelines identify Body Areas and Organ Systems as a framework for documenting the physical exam, but do not say what to chart under either. The 1997 guidelines define mandatory physical exam elements and called them Bullets. A comprehensive exam requires all bulleted items to be examined, and at least 2 per system to be documented.

ED Charting and Coding: Physical Exam (PE)

According to the 1995 guidelines for medical documentation, there are 10 systems that constitute a complete ROS needed for Level 5 visits. When you review all of the systems with patients, you need to use documentation like a review of systems checklist. However, there are those who don't follow the guidelines strictly.

The health care system is awash in clinical documentation, both paper and electronic (sometimes a hybrid of the two), from physician and nurse notes to transcribed dictation and more.

Poor Documentation: Why It Happens and How to Fix It

Medical documentation refers to any written or electronically generated information about a client describing services or care provided to that client. Documentation may be in the form of paper records or electronic documents. Electronic documents include computer-created medical record files, faxes, e-mails, pictures, video or audio recordings.
