## **The Deep Hot Biosphere The**

The Deep Hot Biosphere proposes that life on Earth may have been made possible by the slow upward seep of those buried hydrocarbons, rather than the other way around as accepted theories hold. Thomas Gold made a career of turning accepted views upside down, and he was right

## Biosphere: The Myth Of Fossil Fuels

### **biosphere: Twenty- five years of ...**

Thomas Gold used the term the deep hot biosphere to describe the microbes which live underground. This hypothesis is different from biogenic oil in that the role of deep-dwelling microbes is a biological source for oil which is not of a sedimentary origin and is not sourced from surface carbon.
